How often should a portable generator be inspected?

Here is a fundamental frequency for portable generator inspections: New-Equipment Inspection - Always test new equipment before sending it to the field or a job site. Pre-Use Inspection - Always test older equipment before use. Daily, Monthly, and Annual Inspections - Set up routine inspections based on how often the equipment operates.

What is a generator inspection checklist?

This sign-off is vital to ensure that inspectors take the inspection seriously and provide the best, most informative, and truthful observations. The Generator Inspection Checklist is straightforward to use. You must download the template, print and copy the checklists you need for your equipment, and train your team to use the document.

Are generator inspections compliant?

One of the best practices to ensure that generator inspections are compliant is to include training information such as the equipment user manuals. Naturally, if you use a printed checklist, like our downloadable Inspection Checklist for safe generator operation, you may need help to include a user manual.

What happens during a generator inspection?

Electrical charges can cause severe or fatal injuries, so ensure that power dissipation occurs before the examination. For the final stage of the generator inspection, the inspector will have to power up the equipment. Assuming the review deems the equipment safe to operate, the inspector should check all functions on a load and off.

What is a generator control inspection & testing?

Control inspection and testing are essential to the generator inspection. After all, generators are vital equipment that we must ensure operates appropriately. The generator's switches, knobs, dials, and other instruments control that operation.

When should a generator receptacle be inspected?

We recommend that these receptacles face inspection while the equipment is off and powered down. Electrical charges can cause severe or fatal injuries, so ensure that power dissipation occurs before the examination. For the final stage of the generator inspection, the inspector will have to power up the equipment.

Gather necessary tools and equipment for inspection. Ensure safety gear is available (gloves, goggles, etc.).
