What is a containerized diesel generator?

Discover the containerized diesel generators at DINGBO Power, offering a mobile and secure power solution for a wide range of applications. These generators are housed in robust containers, providing enhanced security and portability. Ideal for use in remote, outdoor, or temporary sites, they ensure reliable power delivery in any setting.

What is a shipping container generator?

Housed within standard shipping containers, these generators offer a seamless integration of the generator set and its associated equipment, providing a robust solution that combines aesthetics with functionality.

What is a Tier 4 containerized generator?

Our Tier 4 containerized generators are high-powered --500 kW to 1250 kW-- units packaged in 30-foot or 48-foot ISO containers.

What equipment do you need for a container power station?

Our generators can be equipped with explosion-proof switches, lights, and cabinets, along with workbenches and rope hooks. Optional sleds or climbing plows are available to meet the unique operational demands of container power stations in oilfield settings.

What components are included in a generator?

Optional components: automatic fuel transfer pumps and control valves, coolant pumps, oil-water separator, dual power switches, and automatic paralleling systems. Container Design: Built to international container standards, generator sets up to 1000KVA use 20-foot containers, while larger sets (over 1250KVA) are housed in 40-foot containers.

What is a dual pack generator?

Simply put, dual packs are two parallel generators in one ISO container: Two 500 kW generators could be paralleled to achieve a 1000 kW output, or two 625 kW generators to achieve 1250 kW. This dual configuration increases the longevity of the overall unit by preventing the effects of light loading.
