Does powerCON provide shore power solutions for container terminals?

Over the recent years, PowerCon has started to supply shore power solutions for container terminals. Creating a new project named "PowerFlex", PowerCon set out to design and implement low-cost and flexible shore power supply for containerships and include onboard battery charging into the system design.

What is a containership power supply (Ops)?

Containerships rely on the highly pollutant marine fuel to operate, contributing to 50-60% of all ship emissions. Onshore power supply (OPS) is the delivery of shore side electrical power to a ship at berth so its main and auxiliary engines can be turned off.

What are the benefits of a containerized shore power system?

The benefits of a containerized shore power system are many. Most importantly, the containers allow us to pre-manufacture, pre-assemble, and pre-test our solutions in our factory, instead of onsite. Here, the containerized design also ensures easy and fast installation.

What makes IGUs(R) a reliable shore power supply system?

A reliable, robust and flexible shore power supply system from igus(R) is therefore used. A harnessed e-spool is integrated in a three-metre long container that can be handled by forklifts to position the system along the various berths.

What's going on in container and passenger ports?

Ships arriving and departing, containers and merchandise being loaded and unloaded, countless people on the job: there's always a lot going on in container and passenger ports. Our solutions let you reliably supply power to container ships and terminals, large passenger ships, yachts, and boats of all sizes.

What types of vessels does powerCON cover?

PowerCon supplies both high and low voltage shore power solutions and covers all vessel types, from the largest cruise ships to container ships to smaller fishing vessels and ferries as seen from some of our main references below.
