How to charge a lithium ion power tool?

Although lithium-ion power tools are usually supplied with batteries that have some charge in them, we suggest that you always fully charge them before operating them for the first time. Step 1: Plug the charger in to the mains The first step is the most obvious - you have to take the battery charger and plug it in to a suitable mains socket.

Do lithium-ion power tools need to be fully charged?

Although lithium-ion power tools are usually supplied with batteries that have some charge in them, we suggest that you always fully charge them before operating them for the first time. The first step is the most obvious - you have to take the battery charger and plug it in to a suitable mains socket.

Are battery powered power tools a good idea?

Battery powered power tools have become massively popular in recent years as lithium-ion batteries have fallen in price, but we sometimes get questions from customers who have never owned one and want to know about the process of charging the batteries.

Can a universal battery charger damage a power tool battery?

If your original battery charger kicked the bucket and you replaced it with a universal charger, you might be damaging your power tool batteries. The charger that your battery came with has the circuitry and sensors to know when the battery is too hot or overcharged.

How do you put a battery in a cordless power tool?

When inserting the battery in to your cordless power tool, be sure to push it in firmly until it clicks in to place. Top tip: At this point, take a spare battery and put it on charge as well. This way you know you have a replacement battery which is fully charged and ready to go when the first battery has run out of power.

Do cordless tools need a battery?

A reliable power tool battery is essential for anyone using cordless tools, whether for professional work or DIY projects. However, improper charging habits can lead to shorter battery life, weaker performance, or even dangerous situations.
