What is a portable power bank?

A portable power bank is a battery with a special case and a circuit that controls power flow. Just like a bank account, it allows you to store electrical energy and use it later to charge your device.

What is the difference between a power bank and a portable charger?

The only difference with a power bank is in the inclusion of circuitry that provides a precise level of control over the power flowing into and out of the device. Occasionally, you might hear power banks referred to as "portable chargers", because that's exactly how they work.

What is a portable phone charger?

That's where a power bank comes in handy. A power bank, or a portable phone charger, is a portable device that stores electrical energy and can be used to recharge electronic devices like smartphones, tablets, and laptops on the go. But how do portable phone chargers work?

What is a power bank and how does it work?

A power bank is a portable device that stores electrical energy and allows you to charge your devices later. Similar to a bank account, you can deposit energy into a power bank and withdraw it when needed. Before exploring the different types of power banks, let's understand the power measurement unit used in these devices, mAh.

How to charge a power bank?

Another way to charge a power bank is by using a charging station. Other ways to charge a power bank are using your laptop USB port, a car cigarette lighter, or using a solar charger. However, all these methods are slower and you should avoid them unless you can't access a wall charger.

Should you use a power bank or phone charger?

With a power bank or phone charger, you can make sure your cell phone's battery is ALWAYS topped up. If you're interested in comparing different power bank models, head on to our power bank review section.
